The purpose of this database is twofold; on the one hand, we want to enrich the research of Hungarian Africa studies with versatile and plentiful information, on the other hand, we are planning to discover Hungarian publications with African themes in its entirety from the beginning until the present day.

Quick Reference List of Basic Literature to Identify Tropical African Bryophytes

Compiled by Tamás Pócs and Brian O'Shea

Institute of Ecology & Botany, Hungarian Academy of Sciences, H-2163 Vácrátót, Hungary
and 131 Norwood Road, London SE24 9AF, UK.

The aim of this short and selected reference list is to guide bryologists in the very scattered African literature when they try to identify specimens, as no standard bryofloras are available for the whole of Tropical Africa. The idea to compile such a reference list was raised during the Tropical Bryology Workshop held by the British Bryological Society, in the Botany School of Cambridge University, on the 21st of September 1990. The list is based on the senior author's private library and files. We hope that the publication and distribution of such a list, even if incomplete, will prove to be useful for the future taxonomic and floristic works in Tropical Africa with special reference to the Bryologia Africana Project. We also hope that it will encourage further collecting and identification by those who are not well versed in or do not possess the very diversified taxonomic literature on African bryophytes.

Due to the nature of the above task, the list is far from complete. It does not contain items simply describing one species or yielding floristic data. It is a selection of papers that are particularly helpful in identifying specimens which belong to the concerned group, either a monograph or

revision, or containing keys, or good illustrations. The geographical limitation is that of the Bryologia Africana Project, i.e. the area of Tropical Africa south of the Sahara and North of the Flora of Southern Africa Project, including the Indian Ocean Islands from the Seychelles to the Mascarenes. There are some works listed from areas beyond these limits, especially from South Africa, which are relevant due to the tropical species treated in them. At the beginning of each list, there are references to certain general floras or check-lists of different Tropical African areas, then the list follows in alphabetic sequence, giving the names of FAMILIES or SUBFAMILIES or of the Genera, Sub-genera or Sections. The relevant literature follows in very abbreviated form, omitting all but the author and year and giving only the first page of the publication if the whole paper deals with the concerned taxon, or the actual page where the taxon occurs among others. The full reference follows in the Bibliography. The most comprehensive or most up to date treatment is highlighted by boldface printing of its author and year of publication. There is more detailed information in Greene, S.W. & A.J.Harrington: The Bryological Literature of Africa, together with some Atlantic and Indian

Ocean Islands. Preparatory edition, Penicuik, 1979, or in Greene, S.W. & A.J. Harrington: The Conspectus of Bryological Taxonomic Literature, Parts 1-2. Bryophytorum Bibliotheca 35 & 37, J. Cramer, Berlin-Stuttgart 1988, 1989; and in standard works such as Index Hepaticarum and Index Muscorum.
